Intensive Care Nursing (1992) **8**, 252–254
© Longman Group UK Ltd 1992

Subject index

A

Advocacy in critical care, 47
Alimentary tract stability, enteral feeding and, literature review of recent advances in, 185
Ambulance personnel, acute myocardial infarction patients' chest pain as monitored by, 113
Auditory environment, patient's, having positive rather than negative effects on recovery and quality of life, 245

B

Babies discharged from special care baby units, follow-up care, 33
Bereavement follow-up service in intensive care, 163
Brainstem dead organ donor, nurse's role in management of family of, 140

C

Carbon dioxide and oxygen, transcutaneous monitoring of, comparisons, 40
Cardiopulmonary resuscitation, knowledge and skills in advanced, retention of, 180
  and perceived competence, 76
Catheters, central venous, dressing type and its influence on infection associated with, 199
Central venous catheter-related infection and dressing type, 199
Chaos theory as a useful addition to critical care curriculum, 240
Chest pain in acute myocardial infarction as monitored by ambulance personnel, 113
Children, critically ill, parents' perceptions of needs of parents of, 130
Clinical nurse specialist, personal perspective of the, 71
Coma Scale, Glasgow, neurological assessment using, 94
Coronary artery bypass grafting, pain following, contributing factors, 153
Coronary care
  changing role of nurses in, 82
  primary nursing philosophy relating to, 118

D

Death, brainstem, nurse's role in management of family of organ donor following, 140, *see also* Bereavement

E

Education (in intensive care), *see also* Training
  chaos theory in, 240
  evaluating, 100
Enteral feeding and gut stability, literature review of recent advances in, 185
Environment, patient's auditory, having positive rather than negative effects on recovery and quality of life, 245
Ethical issues in organ donation in intensive care, 227

F

Family/relatives, *see also* Parents
  bereavement follow-up service in intensive care, 163
  high technology care and its influence on, 194
  organ donation from a brainstem dead patient and nurse's role in management of, 140

G

Gastrointestinal tract stability, enteral feeding and, literature review of recent advances in, 185
Glasgow Coma Scale, neurological assessment using, 94
Gut stability, enteral feeding and, literature review of recent advances in, 185

H

High technology, *see* Technology
Humanity in an age of technology, preserving, 54
Humidifcation for ventilated patients, 2
Hyperbaric oxygen therapy, nursing standards in, 17

I

Infection
  central venous catheter-related, dressing type and its influence on, 199
  control, 212
Inotropes, overview of, 169

M

Mead model as framework for nursing care, use of, 203
Mixed venous oxygen saturation (SvO_2), continuous monitoring, 66
Myocardial infarction, acute
  chest pain in, as monitored by ambulance personnel, 113
  current theories and therapies relating to, 104
Myocardial reperfusion injury, current theories and therapies relating to, 104

N

Neurological assessment using Glasgow Coma Scale, 94

High technology, *see* Technology
Humanity in an age of technology, preserving, 54
Humidifcation for ventilated patients, 2
Hyperbaric oxygen therapy, nursing standards in, 17

I

Infection
  central venous catheter-related, dressing type and its influence on, 199
  control, 212
Inotropes, overview of, 169

M

Mead model as framework for nursing care, use of, 203
Mixed venous oxygen saturation (SvO_2), continuous monitoring, 66
Myocardial infarction, acute
  chest pain in, as monitored by ambulance personnel, 113
  current theories and therapies relating to, 104
Myocardial reperfusion injury, current theories and therapies relating to, 104

N

Neurological assessment using Glasgow Coma Scale, 94

O

Organ donation
from a brainstem dead patient, and nurse's role in management of family, 140
ethical issues, 227
Oxygen
hyperbaric, nursing standards in therapy using, 17
saturation, mixed venous (SvO_2), continuous monitoring, 66
transcutaneous monitoring of carbon dioxide and, comparisons, 40

P

Pain
chest, in acute myocardial infarction, as monitored by ambulance personnel, 113
post-coronary artery bypass grafting, contributing factors, 153
Parents' perceptions of needs of parents of critically ill children, 130 *see also* Family

Q

Quality of care, nursing theory based changes of work organisation and their effects on, 10
Quality of life, patient's auditory environment having positive rather than negative effects on recovery and, 245

R

Relatives, *see* Family; Parents
Resuscitation, cardiopulmonary, *see* Cardioplumonary resucitation

S

Sedation scale for intensive care, new, applicability, 149
Sounds heard by patient, ensuring they have positive rather than negative effects on recovery and quality of life, 245
Specialist training, secondary transportation of critically ill people and the need for, 234
SvO_2, continuous monitoring, 66

T

Technology (high)
influence on patients/relatives/nurses, 194
preserving humanity in an age of, 54
Tracheobronchial suctioning, potential hazards, 217
Training, specialist, secondary transportation of critically ill people and the need for, 234, *see also* Education
Transportation of critically ill people, secondary, implications for nurses of, and the need for specialist training, 234

V

Venous catheters, central, dressing type and its influence on infection association with, 199
Venous oxygen saturation, mixed (SvO_2), continuous monitoring, 66
Ventilated patients, humidification for, 2

W

Work organisation, nursing theory based changes of, effects on quality of care, 10
